What is AutoCAD? AutoCAD is a free and a premium-priced desktop design app with various functionalities. The free version is known as AutoCAD LT and is limited to simple 2D drafting. The premium version AutoCAD Professional is feature-rich (including 3D and 3D modeling), which is used to design buildings, machinery, vehicles and everything in between. The free version of AutoCAD is used mainly by architects, engineers and those who are in the manufacturing sector. It is suitable for drawing very simple structures such as simple shapes and other basic objects. AutoCAD LT has two types of license, one is the personal license and another is the corporate license. The personal license is for personal use and is limited to 50 users. The corporate license is for group use by organizations. It is usually for small to medium-sized companies and is generally for on-premise deployment. AutoCAD LT does not include the AutoCAD brand, and therefore cannot be considered a 'traditional' CAD app as such. It is most commonly used by architects, engineers and building contractors for architectural and structural design. Most engineers prefer to use the AutoCAD software for designing physical or technical objects because it is easy to use and provides a great deal of functionality. However, for enterprise CAD, AutoCAD LT does have a lot to offer. It is a popular tool for many organizations for quick 2D drafting. How AutoCAD LT is different from AutoCAD Pro AutoCAD LT is a 2D CAD app. AutoCAD Pro is a full-blown 3D CAD app. AutoCAD LT is optimized for mobile and tablet devices. AutoCAD Pro is designed for both desktop and mobile devices. AutoCAD LT doesn't have 3D modeling features. AutoCAD LT is best for 2D design, drafting, layout, and viewing. AutoCAD Pro is best for 3D design, modeling, and drafting. AutoCAD LT is a solid, reliable CAD tool; it doesn't have any crashing issues like other apps. AutoCAD Pro has issues of its own. Its code is pretty robust and it tends to have fewer issues. AutoCAD LT doesn't have a lot of features that make it a better CAD

Please enable Javascript to watch this video LOS ANGELES -- The Tesla Model S and Model X plug-in electric cars are now the first with supercharging, thanks to a massive expansion of the company's network of ultra-fast charging stations. The latest update includes more than 15,000 new stations now covering more than 300 miles of highway. Tesla CEO Elon Musk says he expects a doubling in the number of supercharger stations over the next few months. He says they are now so ubiquitous, it's rare to see a charging station without one. Of course, that means a lot more money for the company. The latest round of funding valued Tesla at \$41 billion. "Today, it is simply impossible to be a good electric car company if you do not have a network of fast charging stations," Musk said. Musk says there are now more than 1.5 million Superchargers installed across the world. Tesla has been adding new stations at an unprecedented rate in the last year. At this point, it costs about \$60 to charge a Model S battery pack to full capacity, compared to about \$0.10 to \$0.20 for a gas-powered car. That's why people are flocking to the new network of fast charging stations. "I think it will make electric cars more mainstream," said Tesla customer Ron Jackson. "I like the convenience." According to Tesla, they have sold more than 1.2 million electric cars. They're on track to sell 2 million by the end of 2016, and 5 million by the end of 2017.
